BHROMON

The Community-Driven Intelligence Platform for Bangladeshi Exploration

OFFICIAL PRE-SEED PROJECT PLAN
Version: 4.1 — Comprehensive Pre-Seed Edition
Date: June 2026

Company Details: Bhromon Ltd. (Proposed Private Limited Company under RJSC, Bangladesh)
Founder & CEO: M. S. Rana (CEO & Product Lead)
Co-Founder & CTO: Izhaan Intellect
WhatsApp Contact: 01762033445 | **Email:** mybhromon@gmail.com
Website: https://bhromon.fun

BHROMON

The Community-Driven Intelligence Platform for Bangladeshi Exploration

Project Plan v4.0 -- Comprehensive Pre-Seed Edition

> *“"We are not a marketplace. We are the map, the guide, and the trusted companion."”*

Table of Contents

1. Executive Summary
2. Vision, Mission & Values
3. Problem Statement -- Deep Analysis
4. Solution Architecture
5. Market Analysis
6. Target Personas -- Full Profiles
7. Product Features -- Complete Specification
8. User Experience Design
9. Trust & Safety Framework
10. Cold-Start Strategy
11. Technical Architecture
12. Offline-First System Design
13. Cloud Infrastructure & Backend
14. Monetization Strategy
15. Go-to-Market Strategy
16. Competitive Landscape
17. Risk Analysis & Mitigation
18. Team & Hiring Plan
19. Financial Model
20. Development Roadmap
21. KPIs & Success Metrics
22. Legal & Compliance
23. Partnerships & Ecosystem
24. Social Impact
25. Investor Thesis

---

1. Executive Summary

Company: Bhromon | **Stage:** Pre-Seed | **Ask:** $75,000 (≈ BDT 82,00,000)

Bhromon is building Bangladesh's definitive community-owned travel intelligence platform. In a market where 20 million domestic travelers navigate fragmented Facebook groups, decade-old blogs, and booking-biased apps, Bhromon delivers verified ground-truth, offline resilience, and authentic peer knowledge through a mobile-first platform engineered for the realities of Bangladesh's connectivity landscape.

The Opportunity in One Line

> *"Bangladesh has 20M+ domestic travelers, 60%+ smartphone penetration, and zero structured travel intelligence platform -- Bhromon is that platform."*

What Makes Bhromon Different

Dimension	Everyone Else	Bhromon
Content motivation	Booking commissions	Community trust scores
Reliability offline	Crashes at 0% signal	Full functionality in CHT
Content freshness	Static, never updated	Decay alerts + re-confirmation
Trust layer	None / star ratings	Transparent Explorer Score formula
Cold start	Empty map	300 TripLogs seeded pre-launch

Key Numbers

```
- **$75K** seed ask -> 6-month runway to public launch
```

- **300+** verified TripLogs before a single public user signs up
- **8** divisions covered at launch
- **4** revenue streams -- zero banner ads, ever
- **Year 3** break-even target with $170K projected revenue

---

2. Vision, Mission & Values

Vision

A Bangladesh where every traveler -- from a university student backpacking in Sajek to a family planning their first Sundarbans trip -- has access to verified, current, community-owned intelligence about every corner of this country.

Mission

Build the definitive, community-owned repository of travel intelligence for Bangladesh -- structured, searchable, peer-validated, and accessible without internet connectivity.

Core Values

1. Ground-Truth First

Every feature, every design decision, every moderation policy serves one goal: surfacing what is actually true on the ground, not what generates a booking commission.

2. Offline as a Right

Connectivity is a privilege in Bangladesh's most beautiful places. Offline capability is a first-class citizen, not an afterthought. If it doesn't work without signal in the Chittagong Hill Tracts, it doesn't ship.

3. Radical Transparency

The Explorer Score formula is public. Moderation decisions are appealable. Partner content is always labeled. No hidden algorithms, no secret boosts, no paid rankings.

4. Community Owns the Knowledge

Content created by the community belongs to the community. Explorers are credited, recognized, and rewarded. The platform facilitates -- it does not extract.

5. Safety is Non-Negotiable

Travel information can have life-safety consequences. A single false safety tip can ruin a trip or endanger a life. Safety flags receive immediate action, not queue management.

6. Preservation Over Perfection

The undocumented knowledge of a CHT village elder is more valuable than a polished hotel review. Bhromon dignifies local wisdom and creates permanent, searchable records of knowledge that would otherwise be lost.

---

3. Problem Statement -- Deep Analysis

3.1 The Information Desert

Bangladesh's domestic travel market is experiencing rapid growth -- particularly among youth aged 18-35 -- yet the digital information infrastructure is profoundly broken across five dimensions:

Dimension 1: Fragmentation

Travel knowledge in Bangladesh exists across 200+ closed Facebook groups, Messenger threads, decade-old blog posts on BlogSpot, and YouTube videos without searchable transcripts. A traveler planning a trip to Sajek must:

- Join 8-12 Facebook groups
- Post questions and wait hours/days for responses
- Cross-reference contradictory information from strangers
- Discover critical facts (washed-out roads, ferry schedule changes) only upon arrival

Cost to traveler: 4-8 hours of research that produces unreliable results.

Dimension 2: Dangerous Information Asymmetry

The gap between what travelers know before departure and what they encounter on arrival is not merely inconvenient -- it can be dangerous:

- **CHT access rules** change seasonally and by political climate; online information is consistently outdated
- **Road conditions** in haor regions and hill tracts are heavily weather-dependent; no real-time update mechanism exists
- **Ferry schedules** in the Sundarbans and Barisal region change without public announcement
- **CNG and rickshaw fares** in tourist areas are systematically inflated for outsiders; no fair-fare reference exists
- **Safety incidents** (robbery corridors, flood zones, unstable bridges) are known locally but never reach travelers

Cost to traveler: Financial loss averaging BDT 800-2,500 per trip from information asymmetry; in worst cases, safety incidents.

Dimension 3: Commercial Corruption of Trust

Existing digital travel resources in Bangladesh are structurally corrupted by commercial incentives:

- Hotel booking apps surface properties based on commission rate, not quality
- Facebook travel pages monetize through "sponsored" posts indistinguishable from genuine recommendations
- YouTube travel channels receive free stays/meals in exchange for positive coverage, undisclosed
- "Best of" lists in travel blogs are predominantly paid placements

Result: Bangladeshi travelers have developed a deep, rational distrust of digital travel advice. Authentic knowledge stays trapped in private conversations.

Dimension 4: Ephemeral Knowledge

The most valuable travel intelligence -- a working phone number for a reliable boat guide in Tanguar Haor, a warning about a seasonal trail closure, the exact fare for the blue CNG vs the red one -- exists in conversations that disappear. No mechanism exists to make this knowledge permanent, searchable, or verifiable.

Dimension 5: Connectivity Exclusion

The most spectacular travel destinations in Bangladesh -- Sajek Valley, Nilgiri, Tanguar Haor, Sundarban interior, Lawachara -- have poor to zero mobile connectivity. Every existing digital travel platform fails completely at these destinations, precisely when travelers need guidance most.

3.2 Market Failure Summary

Problem	Current "Solution"	Why It Fails
Finding trip info	Facebook groups	Closed, unsearchable, real-time only
Verifying tip accuracy	Ask multiple sources	No consensus mechanism, no decay
Getting offline access	Screenshot everything	No structure, no map, no sync
Fair pricing reference	Ask locals	Locals give outsider prices
Safety information	Hope for the best	No real-time crowdsourced system
Preserving local knowledge	It disappears	No structured documentation platform

---

4. Solution Architecture

4.1 Platform Philosophy

Bhromon is a **geospatial knowledge graph** -- not a booking platform, not a social network, not a review aggregator. The distinction matters:

- A **knowledge graph** structures relationships between places, tips, people, and time
- Every piece of content has a location, an author, a timestamp, a trust score, and a freshness state
- The graph becomes more valuable with every addition because connections between nodes increase exponentially
- No single entity -- including Bhromon -- can corrupt the graph without the community detecting it

4.2 The Core Loop

```
DISCOVER -> DOCUMENT -> VALIDATE -> SHARE -> EARN REPUTATION -> UNLOCK PRIVILEGES
    ^                                                              |
    +------------------------ Repeat -------------------------------+
```

Every feature is designed to strengthen one or more steps in this loop.

4.3 The Five Pillars

Pillar 1 -- The Verified Map

Every location pin carries a **Trust Score** computed from:

- Community confirmation count and recency
- Author's Explorer Score
- Flag history (Outdated / Inaccurate / Spam / Safety)
- Time since last confirmed activity

```
Pins are color-coded: Grey (Unverified) -> Mint (Community) -> Gold (Verified) -> Deep Green (Regio
n Expert) -> Amber (Pioneer)
```

The map is offline-capable: pre-cached OpenStreetMap tiles + downloaded pin data means full navigation at zero signal.

Pillar 2 -- TripLogs

Structured travel stories built on a block-based editor:

Block Type	Content	Special Feature
Text	Rich formatted narrative	Inline translation hints
Image	Photo with caption	Auto-compress, EXIF strip, offline cache
Video	Short-form travel clip	Auto-compress, video caching
Cost Entry	Itemized expense table	Live BDT/USD total
Route	Drawn polyline on map	Offline-navigable

Safety Note	Flagged warning text	Info / Warning / Danger severity

TripLogs have a **Completeness Gate**: must include title, ≥1 image/video, ≥1 cost entry, a safety details note, and a drawn route before publish. This structural requirement produces rich, comparable content rather than "nice photos, but where exactly?"

Pillar 3 -- Pro-Tips Engine

Bite-sized local wisdom with an expiry date.

Every Pro-Tip carries:

- `lastConfirmed` timestamp

```
- `decayStatus`: Fresh (<30 days) -> Aging (30–180 days) -> Stale (>180 days)
```

- `helpfulVotes`, `outdatedVotes`, `flagCount`

```
- `decayFactor`: 0.0->1.0 weight for feed ranking
```

When a tip reaches Stale status:

1. A nightly Cloud Scheduler marks it
2. FCM push sent to original author + nearby saved users
3. Decay badge turns red in UI
4. Feed ranking weight drops to near-zero
5. Author or any confirmed user can re-validate with one tap

This creates a **self-cleaning database** -- tips either stay accurate or visibly die.

Pillar 4 -- Offline Vault

One-tap district download. Works at zero signal.

Download includes:

- All LocationPins for the district bounding box
- All TripLogs linked to those pins (full content, all blocks)
- All Pro-Tips for those locations
- Pre-compressed images for all ImageBlocks (max 800px, JPEG 80%)
- OpenStreetMap tile cache (zoom 10-16, ~50 MB/district)

Offline writes queue to an **outbox** in Hive, sync automatically on reconnect, and route to a **three-way merge dialog** on conflict.

Pillar 5 -- Trust Engine

The Explorer Score system is the immune system of the platform.

```
Score = (helpfulVotes × 2) + (tripsPublished × freshnessDecay)
      + peerEndorsements − (spamFlags × 5) − (safetyFlags × 10)
```

The formula is **publicly displayed** in every user's score breakdown screen. Gaming attempts are visible -- any unusual spike in helpful votes from new accounts triggers the flag aggregation pipeline.

Trust tiers gate platform privileges:

```
- **Unverified** -> Post Pro-Tips only
- **Community (≥50)** -> Publish full TripLogs
- **Verified (≥200)** -> Create Premium Guides
- **Region Expert (≥500 + council nomination)** -> Division moderation tools
- **Pioneer (Founding program)** -> Permanent, permanent badge, cannot be demoted
```

---

5. Market Analysis

5.1 Market Sizing

Total Addressable Market (TAM): ~20 million

Bangladesh's domestic leisure travel market. Post-pandemic recovery has driven consistent growth, with BTRI (Bangladesh Tourism Research Institute) estimating 18-22 million domestic leisure trips annually. Youth-led travel is the fastest-growing segment.

Serviceable Addressable Market (SAM): ~5 million

Urban mobile-first travelers aged 18-35 who actively research trips via smartphone. This segment:

- Has 4G LTE access in home cities
- Uses Facebook groups and YouTube for travel research
- Owns a smartphone with ≥2GB storage for offline content
- Makes ≥2 leisure trips per year

Serviceable Obtainable Market (SOM -- Year 1): 50,000 MAU

Achievable through:

```
- Founding Explorers network effects (30 -> 10K within 3 months)
```

- University ambassador program (15 campuses, ~150 active ambassadors)
- Invite-only FOMO beta launch
- Organic social sharing of TripLog content

Year 3 Target: 150,000 MAU

Driven by:

- Proven content quality attracting organic search traffic
- Partnership with Bangladesh Tourism Board
- Word-of-mouth from satisfied travelers
- Premium Guide marketplace attracting top content creators

5.2 Market Dynamics

Tailwinds:

```
1. Bangladesh GDP per capita rising -> more discretionary travel spend
```

2. Gen Z and millennial travel culture maturing in urban centers
3. 4G coverage expanding -- 60% smartphone penetration
4. Government investment in tourism infrastructure (CHT, Sundarbans corridors)

```
5. Rise of "workation" culture post-COVID -> longer domestic trips
```

Headwinds:

```
1. Low digital payments adoption -> monetization friction
```

2. Content moderation at scale in Bengali language requires specialized capability
3. Some target demographics still prefer WhatsApp/Facebook over dedicated apps
4. Regulatory uncertainty around CHT content (government sensitivity)

5.3 Revenue Opportunity

At 150,000 MAU with 5% premium conversion:

- 7,500 Premium Guide purchases/month @ average BDT 250 = **BDT 18.75L/month**
- 50 active Partner listings @ BDT 8,000/month = **BDT 4L/month**
- 2 Regional Board contracts @ BDT 3,00,000/year = **BDT 50K/month equivalent**
- **Total: ~BDT 23L/month (~$21K/month) at Year 3 scale**

---

6. Target Personas -- Full Profiles

Persona 1: Shefali -- The Modern Explorer

Demographics: 21, Dhaka University computer science student, lives in Mirpur, family income BDT 60K/month

Travel behavior:

- 3-4 trips/year, budget BDT 3,000-8,000 per trip
- Always travels with 2-4 friends, never solo
- Documents everything on Instagram Stories and Reels
- Prefers off-beat destinations: Sajek backtrails, Tanguar Haor boat routes, Birishiri
- Books nothing in advance -- decides week-of

Pain points:

- Spends 6+ hours on Facebook groups before every trip
- Gets contradictory information, goes anyway, discovers the truth on arrival

- Has been ripped off by CNG drivers who "didn't know" the local rate
- Lost a hiking trail once because the blog post was from 2018 and the route had changed

What Bhromon gives her:

- One search replaces 6 hours of Facebook scrolling
- Exact CNG fare for every common route, confirmed within the week
- Trail condition updated by someone who hiked it 3 days ago
- Her own trip becomes a TripLog that helps the next Shefali

Explorer journey:

```
Month 1: Discovers app via university ambassador -> reads 3 TripLogs -> goes on trip
Month 2: Adds 4 Pro-Tips after returning -> earns Community tier
Month 3: Publishes her first full TripLog -> 47 upvotes in first week -> Verified tier
Month 8: Creates a Premium Guide to Sajek -> earns BDT 3,500 in first month
```

Persona 2: Karim -- The Weekend Professional

Demographics: 31, mid-level bank manager in Chittagong, married with one child, household income BDT 1.5L/month

Travel behavior:

- 6-8 weekend trips/year + 1-2 longer family trips
- Budget BDT 15,000-40,000 per trip
- Time-poor: needs reliable, copy-paste itineraries
- Cox's Bazar, Sylhet, Bandarban are repeats; wants new destinations
- Books accommodation in advance; prefers verified recommendations

Pain points:

- Doesn't have time to research -- just needs it to work
- Has arrived at a "recommended" guesthouse to find it closed for renovation
- Needs cost certainty to plan family finances
- Safety is non-negotiable with a 6-year-old

What Bhromon gives him:

- A complete 2-day Bandarban itinerary with confirmed costs, copied to notes in 30 seconds
- Guesthouses marked as Verified (with recency) vs Unconfirmed
- Safety notes for each location with exact child-specific considerations
- One-tap download of the district before his phone goes offline in the hills

Monetization value:

Karim will pay BDT 150-300 for a Premium Guide that saves him 3 hours of research. He'll purchase 4-6 per year. He's the platform's most direct revenue source.

Persona 3: Farida -- The Local Sage

Demographics: 58, retired schoolteacher in Bandarban district, has lived in CHT for 30 years

Knowledge profile:

- Knows every navigable trail within 40km of her village
- Has relationships with every boat captain on the Sangu River
- Remembers which trails flood in which months and exactly how deep
- Can name the best food stalls, identify safe camping sites, predict weather by cloud patterns

Current behavior:

- Answers questions in the local Facebook group (500 members)
- Takes calls from strangers referred by friends-of-friends
- Has never been paid for this knowledge
- Knows her information reaches maybe 50 people/year

Pain points:

- No way to make her knowledge permanently available
- Answering the same questions repeatedly is exhausting
- Has no way to update information when conditions change
- Feels her knowledge will be lost when she's gone

What Bhromon gives her:

- A structured format that captures her knowledge in a searchable, permanent form
- Pioneer badge from the Founding Explorers program -- permanent recognition
- Her Pro-Tips reaching thousands of travelers instead of 50
- The dignity of being credited as a Region Expert for CHT
- A small stipend from the Founding Explorers commission fund

Platform value:

Farida's network and authentic knowledge creates the most defensible moat. No competitor can replicate 30 years of ground-truth CHT knowledge held by trusted local figures.

Persona 4: Rafiq -- The Ambitious Photographer

Demographics: 27, freelance travel photographer in Dhaka, building an Instagram following (12K followers)

Content behavior:

- 10-12 trips/year, subsidized by photography assignments
- Documents everything: photos, costs, transportation details, timing

- Has 3 unpublished Notion documents full of detailed trip notes
- Wants to monetize his knowledge but doesn't know how

What Bhromon gives him:

- A platform where his structured knowledge earns Explorer Score

```
- Verified tier unlocks Premium Guide creation -> monetization
```

- Profile page doubles as a portfolio -- links to his full TripLogs
- Brand differentiation: "Rafiq -- Verified Bhromon Explorer, CHT Specialist"

Revenue potential:

```
At Verified tier, Rafiq creates 2 Premium Guides/month @ BDT 400 each -> BDT 640/month after platfo
rm 20% -> modest but meaningful passive income that grows as his follower base does.
```

---

7. Product Features -- Complete Specification

7.1 Discovery Map

Feature	Specification	Priority
MapLibre GL rendering	OpenStreetMap tiles, offline-capable	P0
Trust-tier pin colours	5 tiers, colour-coded, legend always visible	P0
Pin clustering	Density-based clustering for urban areas	P0
Proximity search	GeoHash-6 range query, 50m-50km radius	P0
Division filter	Filter by all 8 BD administrative divisions	P1
Trust-tier filter	Show only Verified+, Community+, or All	P1
Map filter persistence	Filter state saved in UserPrefs Hive box	P2
Long-press draft pin	Initiates new LocationPin creation flow	P1
Live TripLogs overlay	"3 TripLogs here" callout on tapped pin	P0
Satellite tile toggle	Switch between street and satellite view	P2

7.2 TripLog Editor

Feature	Specification	Priority
Block-based editor	Drag-reorder blocks via long-press	P0
Text blocks	Rich text: bold, italic, lists	P0
Image blocks	Pick from gallery or camera, auto-compress	P0
Cost entry blocks	Itemized rows, live BDT/USD total	P0
Route drawing	Polyline draw on inline map, save GeoPoints	P0
Safety note blocks	Info / Warning / Danger with icon + color	P1
Completeness gate	Checklist shown before publish: 5 requirements	P0
Auto-save draft	Every 30 seconds to Hive; survives app kill	P0
Draft recovery	Prompts to restore unsaved draft on open	P1
TripLog preview	Full rendered preview before publish	P1
Sync status chip	Synced / Pending / Conflict indicator in editor	P0
Location pinning	Attach TripLog to existing or new LocationPin	P0
Word/image count	Live count in footer: "1,240 words - 8 photos"	P2

7.3 Pro-Tip Engine

Feature	Specification	Priority
Tip submission	Max 280 characters, category required	P0
Category selector	Transport / Food / Safety / Route / Stay / Heritage	P0
Helpful vote	Tap thumb-up; optimistic update; deduped	P0
Outdated vote	Marks for decay; contributes to demotion	P0
Decay badge	Green / Amber / Red; visible on all tip surfaces	P0
Re-confirm tap	One tap -> ConfirmTipUseCase -> reset timestamp	P0
Last Confirmed display	"Confirmed 3 days ago" on every tip	P0
Stale bar	Red "Re-confirm needed" bar on 180d+ tips	P0
Author attribution	Name + tier badge on every tip	P1
Tip categories feed	Filter tips by category at a location	P1
Tip flagging	Flag as: Outdated / Inaccurate / Spam / Safety	P0
Decay notification	FCM push to author + saved-district users	P1

7.4 Offline Vault

Feature	Specification	Priority
District picker	Visual district selector with size estimate	P0
Download progress	Stream progress 0.0 -> 1.0 with step labels	P0
OSM tile pre-cache	Zoom 10-16, ~50 MB per district	P0
Image pre-fetch	Download + compress all TripLog images	P1
Encrypted storage	AES-256 Hive boxes via flutter_secure_storage	P0
Offline write queue	Hive outbox; FIFO; persists across app kills	P0
Auto-sync on reconnect	ConnectivityService triggers SyncManager	P0
Outbox count badge	Red badge on Vault nav tab	P0
Sync status bar	Persistent banner when outbox > 0	P0
Merge conflict dialog	3-way: Original / Local / Server / Edit merged	P1
Delete vault	Remove district bundle + tiles + images	P1
Bundle size display	"47 MB - Last synced 2 days ago"	P1
Offline search	Search cached TripLogs + tips by keyword	P2

7.5 Trust & Moderation

Feature	Specification	Priority
Explorer Score display	Score + tier + badge on all profile surfaces	P0
Score breakdown	"How is my score calculated?" full detail screen	P1
Flag bottom sheet	4 flag types; Safety = instant hide	P0
Auto-moderation	Cloud Function thresholds: Spam≥2, Outdated≥3	P0
Immediate safety hide	Content hidden before moderation review	P0
Appeal flow	Submit reason -> co-founder review -> FCM result	P1
Tier upgrade notification	FCM when crossing tier threshold	P1
Region Expert nomination	Admin-initiated; requires 500+ score	P2
Pioneer badge	Permanent; assigned during Founding program	P0
Public formula display	Score formula visible to all users	P0
Weekly leaderboard	Top explorers by division this week	P2
Streak system	Daily activity streak; +XP bonuses	P2

7.6 Premium Guides

Feature	Specification	Priority
Creation gate	Verified tier (≥200 score) required	P0
Long-form format	Extended TripLog with additional block types	P1
Price setting	Author sets BDT 99-999 range	P1
Purchase flow	In-app purchase via bKash / Nagad / card	P1
80/20 split	80% to author, 20% to platform	P0
Guide preview	First 3 blocks free; rest paywalled	P1
Author earnings dashboard	Monthly earnings, purchases, downloads	P2
Guide featuring	Staff pick label; editorial curation	P2

7.7 Traveler Chats

Feature	Specification	Priority
Direct messaging	Chat peer-to-peer between explorers	P1
Active chat lists	Display list of ongoing chats with last message	P1
Participant lookup	Launch chat window from any public profile	P1

7.8 OTA Auto-Updates

Feature	Specification	Priority
Version check	Compare local code version against Firestore `app_config/version`	P0
Dialog alert	Display version release notes and direct download button	P0
Mandatory updates	Support blocking modal if version is marked mandatory	P0

7.9 AR Compass / HUD

Feature	Specification	Priority
Camera overlay	Render proximity points as floating cards on live camera stream	P2
Orientation sync	Sync compass bearing with hardware magnetometer	P2

7.10 SOS Hub Dialog

Feature	Specification	Priority
Emergency contacts	quick access to local rescue services by region	P1
Direct dial	Tap contact card to trigger device phone call	P1

---

8. User Experience Design

8.1 Design Principles

1. Context-aware information hierarchy

The home screen knows your division, your score, your vault status, and your activity streak. It surfaces the most relevant content for *your* context -- not a generic best-sellers list.

2. Decay is visible, never hidden

No content that might be outdated should look the same as fresh content. The decay badge system makes information age a first-class UI element, not a hidden metadata field.

3. Offline confidence, not offline anxiety

The app should never leave a user uncertain about what's available offline. The vault status bar, district download badges, and offline-ready indicators give constant, unambiguous status.

4. Trust signals at every touch point

Every piece of content -- every pin, every TripLog, every tip -- carries its trust tier, its age, and its confirmation status. Users should never have to wonder "but is this reliable?"

5. Actions earn recognition

Every helpful action is acknowledged. Upvoting a tip, re-confirming accuracy, publishing a TripLog -- each earns visible score, tier progress, or a streak extension. The platform should feel like it appreciates you.

8.2 Screen Architecture

```
App Shell (go_router)
+-- Discover (Home Feed)          ← Default landing screen
|   +-- Featured TripLogs (horizontal scroll)
|   +-- Nearby Spots (distance-sorted pins)
|   +-- Explorer Spotlight (top contributors)
|   +-- Live Pro-Tips (category-filtered)
|   +-- Daily Challenge widget
|
+-- Map (Full-screen MapLibre)
|   +-- Trust-tier colour pins
|   +-- Cluster view (>5 pins in viewport)
|   +-- Filter bar (tier / division / category)
|   +-- Pin popup -> detail -> TripLog list
|
+-- + Create (FAB -> bottom sheet)
|   +-- New TripLog -> Editor screen
|   +-- New Pro-Tip -> Add tip sheet
|   +-- New Location Pin -> Draft pin overlay
|
+-- Vault (Offline Manager)
|   +-- Downloaded districts grid
|   +-- Download new district flow
|   +-- Sync status + outbox queue
|   +-- Conflict resolution screen
|
+-- Profile (Explorer Profile)
    +-- Score + tier + badges
    +-- Trip history grid
    +-- Division expertise map
    +-- Achievements + streak
```

8.3 Navigation Patterns

- **Bottom navigation:** Discover - Map - + - Vault - Profile
- **Deep links:** `bhromon.app/trip/{id}`, `/guide/{id}`, `/profile/{uid}`
- **Back behavior:** Standard Android back stack; iOS swipe-to-back
- **Modal sheets:** All creation flows; flag sheet; conflict dialog; filter panels

```
- **Full-screen transitions:** Map -> pin popup -> TripLog detail
```

- **Tab state preservation:** Each tab maintains its scroll position and filter state

8.4 Accessibility Standards

- All tap targets ≥ 48 × 48 dp
- WCAG 2.1 AA contrast (≥4.5:1 for all text/background)
- Full screen reader support (Semantics widgets throughout)
- Large text support via MediaQuery.textScaler
- Colour is never the sole conveyor of information (decay dot + text label)
- VoiceOver / TalkBack tested before each release

---

9. Trust & Safety Framework

9.1 Defense-in-Depth Model

Bhromon's content moderation operates across six independent layers:

```
Layer 1: Pre-publish gates (client-side validation)
Layer 2: Trust tier gating (Unverified cannot post TripLogs)
Layer 3: Community flagging (4 flag types + instant safety action)
Layer 4: Freshness decay (automatic staleness marking)
Layer 5: Cloud Function auto-moderation (threshold-based)
Layer 6: Human review (founder spot-checks + Region Expert council)
```

No single layer is sufficient. Content that passes Layer 1 can still be flagged at Layer 3. Content that passes all automated layers is spot-checked at Layer 6.

9.2 Explorer Score Formula

```
Score = (helpfulVotes × 2)
      + (tripsPublished × freshnessDecayFactor)
      + peerEndorsements
      − (spamFlagsReceived × 5)
      − (safetyFlagsReceived × 10)
```

Key design decisions:

- Safety flags penalize 2× more than spam flags -- reflects real-world severity
- Trip freshness decay factor: score contribution decreases as published content ages

- Formula is fully public -- visible in app, documented in help center
- No hidden multipliers, no A/B-tested invisible boosts

9.3 Flag Processing

Flag Type	Immediate Action	Threshold	Post-Threshold Action
Outdated	Visual stale badge on content	3 flags	Feed rank ×0.5; author notified
Inaccurate	None	3 flags	Review queue; author notified
Spam	None	2 flags	Content hidden; review queue
Safety	**Content hidden immediately**	1 flag	Founder FCM alert; 24h review SLA

9.4 CHT & Sensitive Areas Policy

The Chittagong Hill Tracts require special handling:

- **Travel advisory prompt** automatically displayed on all CHT-region content
- **Military zone restrictions** -- any content mentioning restricted areas is flagged for manual review
- **Local community respect** -- explicit guidelines for photographers and trekkers visiting indigenous communities
- **Collaboration with indigenous rights organizations** -- advisory board includes CHT community representatives
- **No political content** -- content expressing political opinions about CHT status is out of scope and removed

9.5 Content Moderation SLAs

Flag Type	Review SLA	Escalation
Safety	24 hours	Founder review within 4 hours if high severity
Spam	72 hours	Auto-action at threshold; manual review within 72h
Outdated / Inaccurate	7 days	Community re-confirmation preferred over removal
Appeal	5 business days	Final decision by co-founder; documented and disclosed

---

10. Cold-Start Strategy

10.1 The Empty Map Problem

Every content platform faces the cold-start problem. For Bhromon, an empty map at launch would be catastrophic -- users who arrive to find no TripLogs for their destination will never return.

Our answer: launch with more content than most platforms achieve in their first 6 months.

10.2 Founding Explorers Program

Recruitment criteria (30 explorers):

- Active travel community presence (blog, Instagram, YouTube, Facebook group admin)
- Demonstrated personal knowledge of specific regions
- Commitment to quality documentation, not just quantity
- Willingness to follow Bhromon content standards
- NOT selected by follower count -- selected by content depth

Incentives:

- Permanent **Pioneer badge** (gold, cannot be earned any other way)
- Optional **advisory equity shares** (2-5% of advisory pool for top contributors)
- Profile **spotlight** on launch marketing materials
- **Stipend:** Top 10 selected explorers receive BDT 20,000 each from the BDT 2,00,000 commission fund
- **Early access** to Premium Guide creation (bypasses Verified tier requirement)

Content targets per Founding Explorer:

- Minimum 10 TripLogs covering their specialty region
- Minimum 25 Pro-Tips per region
- At least 3 TripLogs must include full cost breakdowns

Platform launch targets:

- 300 verified TripLogs across all 8 divisions
- 750 Pro-Tips with less than 30 days old (fresh at launch)
- Coverage of at least 20 most-searched destinations
- Average TripLog quality score >4.5/5 (manual co-founder review)

10.3 Quality Gate Process

Every piece of seed content undergoes a 3-day co-founder review sprint:

Review criteria:

1. **Helpful:** Does this answer a real traveler question?
2. **Accurate:** Can key facts be independently verified?
3. **Fresh:** Does it reflect current conditions (2024-2025)?

4. **Structured:** Does it use all relevant block types?
5. **Safe:** Does it include appropriate safety notes where needed?

Content failing any criterion is returned to the Founding Explorer with specific feedback. No exceptions for Pioneer badges.

10.4 Pre-Launch Waitlist Strategy

Phase -2 (6 months before launch):

- "Bhromon Insiders" private Facebook group -- behind-the-scenes building, 2,000-person waitlist target
- Weekly "From the Trail" newsletter featuring Founding Explorer sneak peeks
- Instagram Stories documenting the Founding Explorer content-creation process

Phase -1 (2 months before launch):

- Founding Explorers publish teaser content publicly -- hidden waterfall, secret viewpoint, local food find
- Each piece of teaser content drives to waitlist signup
- 15 university ambassadors host "Discover Your Country" sessions at DU, CU, RU, JU, and 11 others

Launch week:

- Invite-only beta for 7 days -- first 5,000 waitlist members only
- Every user gets 5 invite codes to share
- FOMO drives secondary waitlist surge

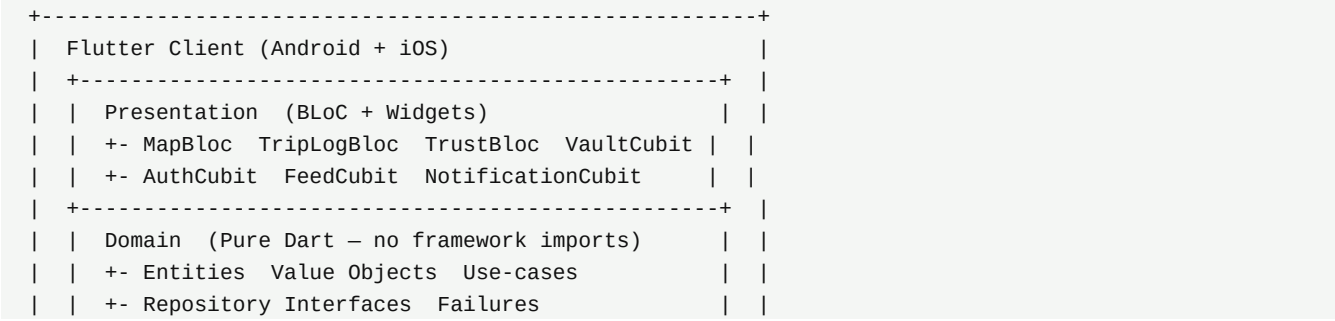

---

11. Technical Architecture

11.1 Stack Decision Rationale

Technology	Choice	Why
Client	Flutter (Dart)	Single codebase for Android + iOS; strong offline support; Hive integration
State mgmt	flutter_bloc	Battle-tested; excellent testability; clear event/state separation
DI	get_it + injectable	Code-generated; zero runtime overhead; type-safe
Navigation	go_router	Deep link support; shell routes for bottom nav; auth guard built-in
Auth	Firebase Auth	Phone OTP critical for BD market; Google as fallback; battle-tested
Database	Cloud Firestore	Real-time listeners; offline SDK; flexible schema for evolving data model
Local DB	Hive	Flutter-native; AES-256 encryption; fast; no SQL overhead
Maps	MapLibre GL	OpenStreetMap; offline tiles; no Google Maps API cost
Functions	Firebase Cloud Functions (Node/TS)	Trigger on Firestore events; cron for decay; trusted compute for scores
Storage	Firebase Storage	Image hosting; CDN; direct mobile upload
Push	Firebase Cloud Messaging	Free tier covers all pre-revenue scale; deep-link routing
Crash	Firebase Crashlytics	Production error visibility; symbol upload in CD
Analytics	Firebase Analytics	Event-driven; no PII; GDPR-safe

11.2 Architecture Overview

```
|  +-----------------------------------------------+  |
|  |  Data  (I/O — implements domain interfaces)      |  |
|  |  +- Firestore Sources  Hive DAOs  Models         |  |
|  |  +- SyncManager  ConflictResolver  ImagePipeline |  |
|  +-----------------------------------------------+  |
+------------------------+-------------------------------+
                         |
          +--------------+--------------+
          | Firebase (asia-south1)      |  Hive (encrypted)
          | Auth · Firestore · Storage  |  AES-256 local boxes
          | Functions · FCM · Analytics |  OSM tile cache
          +-----------------------------+
```

11.3 Feature Module Structure

```
lib/features/
+-- map/            Geospatial discovery + trust pin rendering
+-- trip_log/       Block editor + publish + feed
+-- pro_tip/        Tip submission + vote + decay display
+-- offline_vault/  Download + SyncManager + conflict UI
+-- trust/          Score stream + flagging + moderation
+-- auth/           Phone OTP + Google + profile bootstrap
+-- feed/           Smart home feed aggregation + ranking
+-- explorer/       Public profile + badges + history
+-- premium_guide/  Guide creation + purchase + revenue
+-- notifications/  FCM token + routing + settings
+-- chat/           Direct messaging peer-to-peer explorer chat
+-- ota/            In-app OTA system auto-update manager
```

Module independence rule: No feature may import another feature. Cross-feature communication via shared `core/` domain interfaces only.

11.4 Data Flow Patterns

Read (cache-first):

```
BLoC request -> Repository -> Hive (fresh?) -> YES: return
                                            -> NO: Firestore -> update Hive -> return
                                                   -> Network error + stale cache: return stale + fl
ag
                                                   -> Network error + no cache: Left(NetworkFailure)
```

Write (optimistic outbox):

```
User action -> Hive (optimistic write) -> UI update
            -> Hive outbox enqueue
            -> Online? -> SyncManager.flush() -> Firestore
                       -> Conflict? -> MergeConflictDialog
                       -> Network error? -> backoff + retry
            -> Offline? -> ConnectivityService -> auto-flush on reconnect
```

---

12. Offline-First System Design

12.1 Freshness TTL Matrix

Content Type	TTL	Rationale	Stale Behavior
LocationPin	4 hours	User location changes frequently	Re-fetch silently
TripLog (read)	24 hours	Stable long-form content	Return stale + stale chip
ProTip	1 hour	Decay state must be current	Re-fetch or show aging badge
ExplorerProfile (others)	30 minutes	Score changes infrequently	Background refresh
ExplorerProfile (own)	Real-time stream	User needs live score	Firestore listener
OfflineBundle	Never auto-expire	Manual delete only	Manual refresh button
Feed content	15 minutes	Freshness is a selling point	Pull-to-refresh

12.2 SyncManager State Machine

```
IDLE -> FLUSHING -> SUCCESS (all synced)
              -> CONFLICT (conflict detected, merge required)
              -> RETRY (network error, exponential backoff)
              -> FAILED (max retries exceeded, user notified)
```

Backoff schedule:

- Retry 1: 5 seconds
- Retry 2: 15 seconds
- Retry 3: 60 seconds
- Retry 4: 5 minutes
- Retry 5: 15 minutes
- After Retry 5: markFailed, FCM notification to user

12.3 Conflict Resolution Strategy

Content Type	Strategy	UI
ProTip (edit)	Last-Write-Wins	None -- transparent to user
LocationPin (edit)	Last-Write-Wins	None
TripLog (edit)	Three-way merge required	MergeConflictDialog
TripLog (delete)	Last-Write-Wins	Confirmation only
Vote / Flag	Server authority	Optimistic rollback if fails

Three-way merge dialog panes:

1. **Original** -- common ancestor (grey background)
2. **Your version** -- local outbox copy (mint border)
3. **Server version** -- current Firestore doc (gold border)

User options: "Use mine" - "Use server" - "Edit merged" (free-text editor)

---

13. Cloud Infrastructure & Backend

13.1 Firebase Project Configuration

```
Project: bhromon-prod
Region: asia-south1 (Mumbai)  ← Minimum latency from Bangladesh
Plan: Blaze (pay-as-you-go)
Estimated monthly Firebase cost at 10K MAU:
  Firestore reads:   ~2M reads  -> $0.12
  Firestore writes:  ~500K writes -> $0.09
  Functions:         ~1M invocations -> $0.40
  Storage:           ~20 GB -> $0.50
  FCM:               Free (unlimited)
  Crashlytics:       Free
  -----------------------------------
  Total estimated:   ~$1.11/month at 10K MAU
```

13.2 Cloud Functions Suite

Function	Trigger	Purpose
`computeExplorerScore`	Firestore onWrite: trust_events	Recompute score + tier after any trust event
`decayFreshness`	Pub/Sub schedule: 02:00 BST daily	Mark stale tips; send FCM to authors
`moderateContent`	Firestore onCreate: trust_events	Auto-hide on spam/safety thresholds
`sendDecayNotifications`	Called by decayFreshness	Send FCM to affected users
`notifyFounders`	Called by moderateContent	Alert founders on safety flag
`onNewTripLog`	Firestore onCreate: trip_logs	Update pin.linkedTripIds; award score event
`onNewProTip`	Firestore onCreate: pro_tips	Update pin.linkedTipIds; award score event
`processPremiumPurchase`	HTTP callable	Verify payment; unlock guide; credit author

13.3 Firestore Security Architecture

Core rules:

1. All reads of non-hidden content are public (read without auth)
2. All writes require authentication
3. TripLog creation requires Community tier (score ≥ 50)
4. Premium Guide creation requires Verified tier (score ≥ 200)
5. `explorer_scores` collection: writes blocked from all clients (Cloud Functions only)
6. `trust_events` collection: append-only, no reads by non-owner
7. Region Expert moderation actions require `isRegionExpert` flag in profile

13.4 Storage Rules

```
trip_logs/{tripId}/**  -> Authenticated write, public read, max 5MB, images only
avatars/{uid}/**       -> Own UID write only, public read, max 2MB
premium_guides/{id}/** -> Verified tier write, authenticated read (purchase verified by function)
```

---

14. Monetization Strategy

14.1 Core Philosophy

No banner ads. No algorithmic promotion. No booking commissions.

Every revenue stream must satisfy three criteria:

1. The user understands exactly what they're paying for (or what is promoted)
2. The payment does not compromise content integrity
3. The platform's incentives remain aligned with explorer success, not advertiser success

14.2 Revenue Streams

Stream 1: Community Platform (Free)

Purpose: Network effects, data richness, brand building

Includes all: Verified TripLogs, Pro-Tips, basic map, limited offline vault (1 district), community features, Explorer Score.

Free forever. Revenue comes from the other three streams -- not from access restrictions.

Stream 2: Partner Picks (B2B Subscription)

Model: Monthly listing fee after 30-day free trial

Target partners: Eco-resorts, trekking gear shops, responsible tour operators, transport services

Price range: BDT 2,000-8,000/month depending on listing type

Non-negotiable rules:

- Every Partner Pick carries a permanent "Curated Partner" label -- visually distinct from editorial content
- Partners cannot influence editorial content or Explorer Scores

- Partners cannot flag competitor content
- Listings are reviewed quarterly; removed if community flags exceed threshold

```
- Year 1 target: 10 active partners -> BDT 40,000/month revenue
```

Partner listing types:

Type	Description	Price
Location Partner	Featured on specific pin(s)	BDT 2,000/month
Category Partner	Featured in category (e.g., "Best eco-stays")	BDT 4,000/month
Division Partner	Featured across a division's content	BDT 8,000/month

---

Stream 3: Premium Explorer Guides

Model: Creator marketplace; platform takes 20% commission

Eligibility: Verified tier (Explorer Score ≥ 200) required

Price range set by author: BDT 99-999 per guide

Payment methods: bKash, Nagad, Rocket, VISA/Mastercard

What makes a Premium Guide different from a free TripLog:

- Extended format: no length limits, additional block types (video embed, downloadable PDF checklist)
- Interactive route: turn-by-turn waypoints with distance/time estimates
- Seasonal guide: multiple versions for dry/wet season
- Author guarantee: guide author commits to updating within 30 days of a major change

Revenue projection for Year 2:

- 50 active Verified Explorers
- Average 2 guides each
- 100 guides at average BDT 250
- 500 purchases/month
- **Platform revenue: 500 × BDT 50 (20%) = BDT 25,000/month**

Stream 4: Regional Board Partnerships

Model: Grant / contract income from public tourism bodies

Target: Bangladesh Tourism Board, district councils, NGOs working in sustainable tourism

"Featured Region" product:

An interactive district-level map commissioned by the tourism authority:

- Curated TripLog collection selected by Bhromon editorial team
- Custom map layer with tourism board branding
- Downloadable offline bundle promoted to all Bhromon users
- Quarterly analytics report on traveler behavior in the region

Pricing: BDT 2,50,000-5,00,000 per featured region per year

Year 1 target: 1 featured region pilot (CHT district council or Sundarbans conservancy)

Year 3 target: 3-4 regional partnerships

Disclosure policy: Every Featured Region carries a "Sponsored by [Authority]" label visible to all users. Editorial independence is contractually guaranteed -- the tourism board cannot edit or remove community content.

14.3 Revenue Model Summary

Stream	Year 1	Year 2	Year 3
Partner Picks	$5,000	$25,000	$80,000
Premium Guides (20%)	$2,000	$15,000	$50,000
Regional Grants	$3,000	$15,000	$40,000
Total	**$10,000**	**$55,000**	**$170,000**

USD figures. BDT equivalent at 110 BDT/USD.

14.4 Unit Economics at Scale

Cost to acquire 1 MAU (Year 1):

- Marketing spend: $5,000
- University ambassador program: $3,000 (15 × $200 honorarium)
- Total acquisition budget: $8,000 for 10,000 MAU
- **CAC: $0.80/MAU**

Lifetime value (LTV) per MAU (Year 3):

```
- 5% of MAUs purchase ≥1 Premium Guide/year @ avg BDT 250 -> $1.14/MAU
```

- 0.2% become active guide creators earning platform 20%
- **Conservative LTV: ~$1.50/MAU**

LTV/CAC ratio: ~1.9× at Year 3 -- healthy for a content platform with strong network effects and zero paid distribution costs at maturity.

---

15. Go-to-Market Strategy

15.1 Phase Timeline

```
 **Phase -2: Community Building (Now -> Month -4)**
```

Goal: 2,000-person waitlist + 30 Founding Explorers recruited

Tactics:

- Launch "Bhromon Insiders" private Facebook group
- Weekly "from the trail" content: behind-the-scenes building
- Personal outreach to 80+ travel bloggers, photographers, and group admins
- LinkedIn thought leadership: "Why Bangladeshi travel info is broken" article series
- DM outreach to top travel content creators in BD

```
 **Phase -1: Content Seeding (Month -4 -> Month 0)**
```

Goal: 300 TripLogs, 750 Pro-Tips seeded; 5,000 waitlist

Tactics:

- Founding Explorers publish content on Bhromon (private beta)
- Teasers: each Founding Explorer shares one "hidden gem" discovery publicly, driving to waitlist
- University Ambassador recruitment: 15 campuses, 10 ambassadors per campus
- Press outreach: Prothom Alo, Daily Star, YouthOP, Sangbad Pratidin travel sections
- "Discover Your Country" workshops: virtual + in-person at DU, BUET, NSU

Phase 1: Public Beta (Month 1-2)

Goal: 5,000 installs, 500 user-generated TripLogs

Tactics:

```
 - **Invite-only for 7 days:** Only waitlist members + 5 invite codes each -> FOMO
```

- Launch announcement coordinated across all 30 Founding Explorers simultaneously
- Instagram Reels series: "Hidden BD" -- 15-second videos of under-visited places

```
 - In-app referral: "Invite a friend -> both get Pioneer access badge for 7 days"
```

- Press release picked up by BD travel media
- Product Hunt launch (international tech visibility)

Phase 2: Growth (Month 3-5)

Goal: 10,000 MAU, 2,000 user-generated TripLogs

Tactics:

- **"Trip of the Month" contest:** Best TripLog wins outdoor gear from Partner picks
- **"Verify Your City" campaign:** Users earn double XP for confirming tips in their home city for one week
- Cross-promotion with university travel clubs
- SEO: Bhromon TripLogs begin ranking for "[destination] travel guide Bangladesh"
- Partner Picks launch: 5 eco-resorts, 3 gear shops onboarded

---

Phase 3: Monetization (Month 6-8)

Goal: 20,000 MAU, $1,000 revenue, Premium Guide marketplace live

Tactics:

- Premium Guide creation open to all Verified explorers
- Bangladesh Tourism Board partnership pitch (using data from Phase 1-2 to demonstrate reach)
- Influencer partnerships: pay-per-TripLog (not pay-per-post) model
- Featured Region pilot with one district council

15.2 Channel Strategy

Channel	Primary Goal	Secondary Goal	Budget
Facebook (organic)	Community building	Waitlist growth	$0
Instagram Reels	Brand awareness	App downloads	$500
University ambassadors	User acquisition	Content seeding	$3,000
PR / media coverage	Credibility	Organic downloads	$0
Content SEO	Long-term organic traffic	Brand discovery	$0
Partner co-marketing	Mutual audience growth	Revenue	$0
Product Hunt	International visibility	Developer community	$0

15.3 Content Marketing Strategy

Bhromon's content IS the product. Unlike most platforms that need to create marketing content, Bhromon's TripLogs and Pro-Tips are natively shareable:

- **TripLog share card:** Each TripLog generates an auto-formatted image card for WhatsApp / Instagram sharing
- **Pro-Tip share card:** Each tip gets a shareable design with the Bhromon watermark
- **Founder content:** Co-founders maintain personal travel accounts and cross-reference Bhromon consistently
- **"Tip of the Day":** Daily Instagram Stories post featuring a fresh Pro-Tip -- drives app opens

---

16. Competitive Landscape

16.1 Direct and Indirect Competitors

Competitor	Nature	Strength	Critical Weakness	Bhromon's Edge
Facebook Travel Groups	Massive, unstructured community	200M+ users, zero cost to join	No verification, unsearchable, 100% online-only	Structured + searchable + offline + trust-scored
Google Maps / Lists	Global POI database	Authoritative location data, ubiquitous	No trip narrative, no cost data, no safety context	Rich itineraries, cost breakdowns, safety notes, hidden gems
Tour Aggregator Apps (GoZayaan, Sheba.xyz travel)	Booking-first platforms	Payment infrastructure, partnerships	Content exists to drive bookings -- inherent bias	Content-first; zero booking pressure; trust is the product
Travel Blogs / YouTube	Deep individual expertise	High production value, personality-driven	Siloed, static, impossible to search across creators	Many-to-many graph; community re-verification; decay alerts
TripAdvisor (global)	Established review platform	Brand recognition, large database	BD content is thin and outdated; review-gaming rampant	BD-specific depth; structured trust score vs star-rating gaming
Local newspaper travel sections	Editorial authority	Trusted brand, professional writing	Infrequent, no real-time updates, no offline access	Real-time community updates; offline-first

16.2 Why Incumbents Cannot Easily Copy Bhromon

1. The Offline-First Architecture is a Genuine Engineering Investment

Building genuine offline-first sync with conflict resolution is not a feature toggle -- it's an architectural decision made from day one. Retrofitting this onto an existing booking-first app requires rebuilding the entire data layer.

2. Trust Score Requires a Clean Incentive Structure

A booking platform cannot credibly implement a trust score because its core business model (commission-driven recommendations) directly conflicts with unbiased trust signals. Any trust score they build will be distrusted by users who know the platform profits from specific recommendations.

3. The Founding Explorer Network is a Relationship Asset

30 trusted local experts who joined because of genuine belief in the mission cannot be replicated by a competitor offering higher payment -- the relationship and shared values are the moat, not the content alone.

4. Community-Owned Content Graph Compounds

Every TripLog, every Pro-Tip, every confirmation adds a node and edges to a graph that becomes harder to replicate the longer it exists. A competitor starting today faces the same cold-start problem Bhromon solved at launch.

16.3 Competitive Positioning Statement

> *“"Bhromon is not trying to be a better TripAdvisor or a Bangladeshi Yelp. We are building the trust infrastructure that booking platforms, government tourism boards, and individual travelers will all eventually rely on as the ground-truth layer for Bangladesh.""*

---

17. Risk Analysis & Mitigation

17.1 Risk Register

Risk	Category	Likelihood	Impact	Mitigation Strategy	Owner
Cold-start failure (empty map at launch)	Product	High (without program)	Critical	Founding Explorers Program guarantees 300+ TripLogs pre-launch; quality gate enforced	CEO
Safety misinformation causes real harm	Trust & Safety	Medium	Severe	Instant safety-flag hiding; decay alerts; manual spot-checks; CHT advisory prompts	CTO
Offline sync data loss	Technical	Medium	High	Rigorous SyncManager testing; Phase 1 write-back limited to Pro-Tips only; 3-way merge for TripLogs	CTO
Low-quality content floods feed	Product	Medium	Moderate	Reputation gating (Unverified -> tips only); algorithmic demotion of low-signal content	CEO
Monetization erodes community trust	Business	Low	Moderate	Mandatory partner labeling; no auto-play ads; quarterly partner review; community feedback loop	CEO
CHT geopolitical sensitivity	Legal / PR	Medium	Moderate	Strict content guidelines; advisory board includes CHT representatives; no political content policy	CEO
Key person dependency (CTO/CEO)	Operational	Medium	High	Document all architecture decisions (ADRs); pair programming culture; advisor backup network	Both founders

Firebase cost scaling unexpectedly	Financial	Low	Moderate	Aggressive caching reduces reads by ~80%; monitor Firestore usage weekly; budget alerts set	CTO
Competitor with deeper pockets enters	Market	Medium	Moderate	Speed to market; Founding Explorer relationship moat; community-owned content compounds faster than paid acquisition	CEO
Bengali NLP / content moderation at scale	Technical	Medium	Moderate	Human-in-the-loop moderation through Year 1; invest in Bengali moderation tooling pre-Series A	CTO
App store rejection (Google/Apple policy)	Operational	Low	High	Pre-submission policy review; no UGC moderation gaps; clear content guidelines published	CTO
Seasonal usage dips (monsoon = less travel)	Business	High	Low	Diversify content to include planning-season usage (researching before next dry season trip)	CEO
Currency/payment gateway disruption (bKash/Nagad)	Financial	Low	Moderate	Multi-gateway integration from day one; manual bank transfer fallback for Premium Guides	CTO
Data privacy breach (user location/PII)	Legal	Low	Severe	Firestore security rules audited; EXIF GPS stripping on all images; encrypted local storage	CTO

17.2 Risk Monitoring Cadence

- **Weekly:** Firebase cost dashboard review; flag queue backlog check
- **Bi-weekly:** Content quality spot-check (10 random TripLogs scored against rubric)
- **Monthly:** Full risk register review at founder sync; update likelihood/impact scores
- **Quarterly:** Partner Pick audit; CHT content compliance review; advisory board check-in

17.3 Crisis Response Protocols

Safety incident reported by user (e.g., a Pro-Tip led someone into danger):

1. Immediate: Content hidden (already automatic for safety flags)
2. Within 4 hours: Founder reviews incident, documents timeline
3. Within 24 hours: Direct outreach to affected user; offer support
4. Within 72 hours: Root-cause analysis; policy update if systemic gap found
5. Transparent postmortem published to Bhromon Insiders community (anonymized)

Data breach or security incident:

1. Immediate: Affected systems isolated; Firebase security rules audited
2. Within 24 hours: Determine scope (which users, what data)
3. Within 72 hours: Legal notification requirements assessed (BD data protection law)
4. Public disclosure if user data exposed, per legal counsel guidance

---

18. Team & Hiring Plan

18.1 Founding Team

CEO / Product Lead: M. S. Rana

- Responsibilities: Vision, strategy, Founding Explorer relationships, partnerships, fundraising
- Background: Travel community lead & early-stage startup product developer
- Time allocation: Community (40%) - Product (30%) - Fundraising (20%) - Operations (10%)

Co-Founder & CTO: Izhaan Intellect

- Responsibilities: Flutter architecture, Firebase infrastructure, offline-first systems, technical hiring
- Background: Senior mobile systems engineer & offline-first database architect
- Time allocation: Architecture (30%) - Hands-on coding (50%) - Technical hiring (10%) - DevOps (10%)

18.2 Advisory Board (Sought)

Role	Profile Sought	Value Add
Travel Safety & Ethics Advisor	Respected BD hiking/backpacking community figure	Credibility with target users; safety policy input
Geospatial / Mapping Specialist	GIS or mapping infrastructure background	Offline tile optimization; GeoHash query tuning
Monetization & Partnerships Advisor	Ex-BD Tourism Board or brand partnership manager	Regional Board deal-making; partner pricing strategy
CHT Community Representative	Indigenous rights or CHT development background	Content policy guidance; community trust
Bengali NLP / Content Moderation Advisor	ML/NLP background, Bengali language expertise	Scaling moderation beyond manual review

18.3 Hiring Roadmap (Post-Seed)

Months 1-3 (using seed funding):

- No new hires -- founders execute directly with seed funding covering their own runway

Months 4-8 (Phase 2-3, pending traction):

```
- **Community Manager** (part-time -> full-time) — manages Founding Explorer relationships, content
 quality spot-checks, user support
```

- **Flutter Contractor** (part-time) -- accelerates Phase 3 feature backlog (Premium Guides, offline write-back)

Post-Series A (future, not in current ask):

- Backend Engineer (Cloud Functions, Firestore optimization at scale)
- Bengali Content Moderator (full-time, scales human review layer)
- Growth Marketer (paid acquisition once unit economics proven)
- Designer (dedicated UI/UX, currently founder-led)

18.4 Culture Principles

1. **Ship with the community, not at them** -- every major feature gets Founding Explorer feedback before public release
2. **Document decisions, not just code** -- Architecture Decision Records for every significant technical choice
3. **Default to transparency** -- internal metrics shared with Founding Explorers monthly
4. **Bias toward action** -- 2-week sprint cycles, weekly founder syncs, no permission-seeking culture

---

19. Financial Model

19.1 Seed Funding Ask: $75,000 (≈ BDT 82,00,000)

19.2 Use of Funds Breakdown

Category	%	Amount (USD)	Amount (BDT)	Detail
Core team stipends (6 months)	40%	$30,000	BDT 33,00,000	CEO + CTO runway to public launch
Founding Explorer program	20%	$15,000	BDT 16,50,000	BDT 2,00,000 commission fund + logistics/travel for content creation
Marketing & launch events	15%	$11,250	BDT 12,37,500	University ambassadors, launch event, Instagram Reels production
Cloud infrastructure	10%	$7,500	BDT 8,25,000	Firebase Blaze plan, OSM tile hosting, image storage, buffer for scale
Legal & compliance	15%	$11,250	BDT 12,37,500	Company registration, IP/trademark filing, advisor agreements, contingency

19.3 3-Year Revenue Projection

Year	MAU	Premium Guides	Partner Listings	Regional Grants	Total Revenue (USD)	Total Revenue (BDT)
Year 1	10,000	$2,000	$5,000	$3,000	$10,000	BDT 11,00,000
Year 2	50,000	$15,000	$25,000	$15,000	$55,000	BDT 60,50,000
Year 3	150,000	$50,000	$80,000	$40,000	$170,000	BDT 1,87,00,000

Conservative projections. Revenue ramps as the reputation system matures and Premium Guide supply grows organically with the Verified Explorer base.

19.4 Burn Rate & Runway

Monthly burn (Months 1-6, seed-funded):

- Team stipends: $5,000/month
- Infrastructure: $1,250/month

- Marketing: $1,875/month

```
- **Total: ~$8,125/month -> 6-month runway on Founding Explorer + team allocation alone**
```

Legal and one-time marketing/event costs are front-loaded in Months 1-2, extending effective runway for ongoing operations to approximately 7-8 months with disciplined spending.

19.5 Path to Series A

Series A readiness triggers (targeting Month 10-14):

- 20,000+ MAU sustained for 3 consecutive months
- $1,000+ MRR (monthly recurring revenue) from Premium Guides + Partner Picks
- Demonstrated retention: ≥40% Month-2 retention cohort
- At least 1 signed Regional Board partnership
- Clear unit economics: LTV/CAC ≥ 2× at observed scale

Series A use case: Scale content moderation team, expand to video content formats, build native iOS/Android performance optimizations, potentially explore adjacent markets (Nepal, Sri Lanka domestic travel -- similar information desert problem).

19.6 Break-Even Analysis

At current revenue trajectory, break-even is targeted for **end of Year 3**, contingent on:

- Team remaining lean (2 founders + 1-2 part-time hires through Year 2)
- Firebase costs scaling sub-linearly with MAU (achieved via aggressive caching -- validated in architecture)
- Premium Guide marketplace reaching critical mass of 50+ active Verified creators by Year 2

---

20. Development Roadmap

Phase 0 -- Seed & Alpha (Pre-Launch, 2 Months)

Engineering:

- Flutter Clean Architecture scaffold; core feature modules stubbed
- Firebase project setup; Auth (Phone + Google); Firestore schema deployed
- TripLog editor (block-based) -- core functionality
- Map screen with GeoHash proximity query
- Hive offline cache -- read-only (no write-back yet)
- Basic flagging system prototype

Content & Community:

- Recruit 30 Founding Explorers
- Seed 300 TripLogs, 750 Pro-Tips across all 8 divisions
- 3-day co-founder quality review sprint

Milestone: Alpha testers (Founding Explorers) rate content quality >4.5/5

Phase 1 -- Core Public Beta (Months 1-2)

Engineering:

- Invite-code gated public launch
- Full Auth + Firestore data model live
- Verified Geo-Map with proximity search, trust-tier colour coding
- Basic Offline Vault (read-only district downloads)
- Comments and likes on TripLogs
- Explorer Score v0.1 (client-estimated, Cloud Function not yet authoritative)

Go-to-Market:

- 7-day invite-only FOMO launch
- University ambassador activation (15 campuses)
- PR push to BD travel media

Milestone: 5,000 installs, 500 user-generated TripLogs

Phase 2 -- Trust & Community (Months 3-5)

Engineering:

- Reputation engine v1 -- Cloud Function `computeExplorerScore` authoritative
- Verified Explorer badges distributed automatically at threshold
- Community flagging + auto-moderation pipeline (`moderateContent` function)
- Personalized smart feed (ranking algorithm live)
- Partner Picks integration (transparent UI, first 5 partners onboarded)
- Decay system live: `decayFreshness` nightly scheduler + FCM notifications

Go-to-Market:

- "Trip of the Month" contest launch
- Cross-promotion with university travel clubs
- SEO content strategy begins showing early traction

Milestone: Average Pro-Tip helpfulness >4.0; flag accuracy >85%

Phase 3 -- Monetization & Offline Depth (Months 6-8)

Engineering:

- Offline write-back SyncManager with full conflict resolution UI

- Premium Guides marketplace -- creation, purchase, 80/20 revenue split
- Regional Board "Featured Destination" pilot integration
- Performance optimization pass (target: <2s cold start, 60fps map scroll)
- Full public launch (invite-only gate removed)

Go-to-Market:

- Bangladesh Tourism Board partnership pitch using Phase 1-2 data
- Influencer partnership program (pay-per-TripLog model)
- First Featured Region launches

Milestone: 20,000 MAU; first $1,000 in cumulative Premium Guide sales

---

Phase 4 -- Scale & Series A Prep (Months 9-14, contingent on traction)

Engineering:

- Bengali content moderation tooling investment
- Video block type for TripLogs (short-form embedded clips)
- Performance hardening for 50K+ MAU scale
- iOS-specific polish (Apple HIG compliance pass)

Go-to-Market:

- 2nd and 3rd Regional Board partnerships
- Expansion content push: target underserved divisions (Mymensingh, Rangpur)
- Series A fundraising process

Milestone: 50,000+ MAU; $3,000+ MRR; Series A term sheet

---

21. KPIs & Success Metrics

21.1 North Star Metric

Weekly Active Verified Content Contributions -- the number of TripLogs and Pro-Tips published or re-confirmed by Community-tier-or-above explorers each week. This single metric captures content freshness, community trust depth, and platform health simultaneously.

21.2 KPI Dashboard (12-Month Targets)

Metric	Target	Measurement
Verified TripLogs (cumulative)	>5,000	Firestore count, tier ≥ Verified
Monthly Active Users (MAU)	20,000	Firebase Analytics
Offline Vault activation rate	>40% of active users	% users with ≥1 downloaded district
Pro-Tip average freshness	<4 months	Average `daysSinceConfirmed` across all live tips
Community flag accuracy	>90% upheld	% flags confirmed correct on moderator review
Month-2 retention	>40%	Cohort analysis
Revenue (cumulative)	$10,000	Stripe/bKash/Nagad transaction sum
Net Promoter Score (NPS)	>50	Quarterly in-app survey
Explorer Score distribution	>15% Community tier+	% of MAU above Unverified
Safety flag response time	<24 hours	Cloud Function timestamp analysis

21.3 Leading vs. Lagging Indicators

Leading indicators (watch weekly):

- New TripLog submissions per day
- Pro-Tip re-confirmation rate
- Founding Explorer activity (are the 30 still active?)
- App store rating trend
- Outbox sync failure rate (technical health)

Lagging indicators (review monthly):

- MAU growth rate
- Revenue
- NPS
- Partner Pick renewal rate

21.4 Funnel Metrics

```
Waitlist signup -> App install -> First session -> First contribution -> Verified tier -> Repeat co
ntributor
Target conversion rates:
  Waitlist -> Install:          60%
  Install -> First session:     85%
  First session -> First contribution: 25%
  First contribution -> Verified tier: 15% (within 90 days)
```

```
    Verified tier -> Repeat contributor: 50% (monthly active)
```

---

22. Legal & Compliance

22.1 Corporate Structure

- Company registration in Bangladesh (Private Limited Company under RJSC)
- Founders hold majority equity; advisory equity pool reserved (5-8%)
- Founding Explorer equity grants (if offered) structured as advisory shares with vesting

22.2 Data Protection

- User location data (GeoCoordinate) is the most sensitive data type collected
- EXIF GPS metadata stripped from all uploaded images automatically
- Firestore security rules prevent any client from reading other users' raw location history
- Compliance monitoring for Bangladesh's evolving data protection regulatory framework
- Privacy policy and Terms of Service drafted with BD-qualified legal counsel before public launch

22.3 Content Liability

- Platform operates under safe-harbor principles for user-generated content (where applicable under BD law)
- Clear Terms of Service establish user responsibility for content accuracy
- Safety-flag-triggered immediate hiding reduces platform liability exposure for harmful misinformation
- CHT content policy specifically addresses sensitive political/military content restrictions

22.4 Intellectual Property

- Bhromon trademark and logo filed for registration
- TripLog and Pro-Tip content: contributors retain ownership; platform receives perpetual license to display, per Terms of Service
- Open-source dependencies audited for license compatibility (MIT/BSD/Apache preferred)

22.5 Payment Compliance

- bKash and Nagad integration requires merchant account compliance with Bangladesh Bank mobile financial services regulations
- Premium Guide revenue split (80/20) documented in Terms of Service for tax transparency
- VAT/tax obligations on digital transactions assessed with BD-qualified accountant

---

23. Partnerships & Ecosystem

23.1 Partnership Categories

Tier 1 -- Government & Institutional

- Bangladesh Tourism Board (BTRI) -- Featured Region pilot target
- District councils in CHT and Sundarbans periphery
- University partnerships for ambassador program (DU, CU, RU, JU, BUET, NSU, +9 others)

Tier 2 -- Commercial Partners

- Eco-resorts and homestays in target trekking/nature regions
- Outdoor gear retailers (trekking equipment, camping gear)
- Local transport cooperatives (CNG associations, boat operator groups) -- potential fair-fare data partnerships

Tier 3 -- NGO & Community

- CHT indigenous rights organizations (content policy advisory)
- Environmental conservation groups (Sundarbans, wetlands) -- co-create safety/conservation content
- Travel safety and rescue organizations -- emergency contact data integration potential

23.2 Strategic Integration Opportunities (Future)

- **Transport apps:** CNG fare comparison cross-reference (mentioned in original Phase 2 GTM)
- **Payment platforms:** Deeper bKash/Nagad integration for in-trip group expense splitting
- **Weather services:** Real-time weather overlay on map for CHT/coastal trip planning
- **Emergency services:** SOS button integration with local rescue/police contacts by region

---

24. Social Impact

24.1 Knowledge Preservation

Bhromon's Founding Explorer program -- particularly recruitment of Local Sage profiles like Farida -- creates a structural mechanism for preserving indigenous and local knowledge that has historically existed only in oral tradition or private conversation. This has value beyond commercial travel utility:

- Documentation of trail conditions, seasonal patterns, and local ecology contributes to a long-term community knowledge archive
- CHT community members gain a platform for sharing their expertise on their own terms, with attribution and (where structured) compensation
- Knowledge that would otherwise be lost as older community members retire or pass away gains permanence

24.2 Economic Opportunity Distribution

- Premium Guide marketplace creates a new income stream for skilled local guides, photographers, and writers -- particularly valuable in economically underserved regions like CHT and haor areas

- Founding Explorer stipends provide direct, transparent compensation tied to genuine contribution quality, not follower-count-based influencer payments
- Partner Pick program creates discovery channel for small, sustainable tourism businesses that cannot afford traditional advertising

24.3 Safety & Risk Reduction

- Real-time safety flagging and CHT advisory prompts directly reduce traveler risk in sensitive or hazardous areas
- Fair-fare Pro-Tips reduce exploitation of travelers by predatory pricing -- particularly benefits lower-income domestic travelers (students, families) who are most vulnerable to overcharging
- Structured cost breakdowns improve financial transparency and planning for budget-conscious travelers

24.4 Environmental Consideration

- Future roadmap consideration: partner with conservation organizations to flag ecologically sensitive areas with visit guidelines
- Offline-first design reduces redundant data transfer/network load compared to constantly-reloading web-based alternatives
- Potential future feature: carrying-capacity alerts for over-visited fragile ecosystems (e.g., specific Sundarbans trails)

---

25. Investor Thesis

25.1 Why Now

1. **Smartphone penetration crossed 60%** -- the addressable market is finally large enough for a dedicated travel intelligence app
2. **Post-pandemic domestic travel boom** -- Bangladeshi youth travel culture has matured significantly since 2020
3. **Trust in existing platforms is at a structural low** -- booking-biased content has created a vacuum for an authentic alternative
4. **Firebase + Flutter maturity** -- offline-first mobile architecture that was prohibitively complex 5 years ago is now achievable by a small, well-architected team
5. **No incumbent has solved offline-first** -- the single biggest technical differentiator remains uncontested in the BD market

25.2 Why This Team

- Deep personal credibility within the BD travel community (required for Founding Explorer recruitment)
- Technical capability to execute genuine offline-first architecture (not a common skill set)
- Demonstrated commitment to trust-first monetization -- credibly resisting the easier, faster booking-commission revenue model

25.3 Why This Is Venture-Scale

- The content graph is a genuine defensible moat that compounds -- each contribution increases switching costs for users and barriers for competitors
- The architecture, once built for Bangladesh, is highly portable to structurally similar markets (Nepal, Sri Lanka, parts of Northeast India) -- a clear expansion thesis
- Premium Guide marketplace + Regional Board partnerships create multiple paths to meaningful revenue without compromising the core trust proposition
- Trust infrastructure businesses (once established) tend to become essential utility layers that are difficult to displace -- the long-term vision extends beyond "travel app" to "Bangladesh's ground-truth layer"

25.4 The Ask

$75,000 seed funding to:

- Fund 6 months of founder runway to reach public launch and Phase 3 monetization
- Execute the Founding Explorer program that solves cold-start definitively
- Deploy production-grade Firebase infrastructure and Flutter application
- Establish the first Regional Board partnership, proving the institutional revenue thesis

In return: A platform with 20,000+ MAU, $10,000+ cumulative revenue, 5,000+ verified TripLogs, and a clear, validated path to Series A within 10-14 months.

Closing Statement

> *“We have the map. We have the Founding Explorers. We have the trust model. We have the technical architecture to make offline-first travel intelligence real in Bangladesh's most beautiful and most disconnected places.”*

>

> *“Now we need the fuel.”*
