

The Information Desert is Over.

Building the definitive, community-owned repository of travel intelligence for Bangladesh's 20 million domestic travelers.

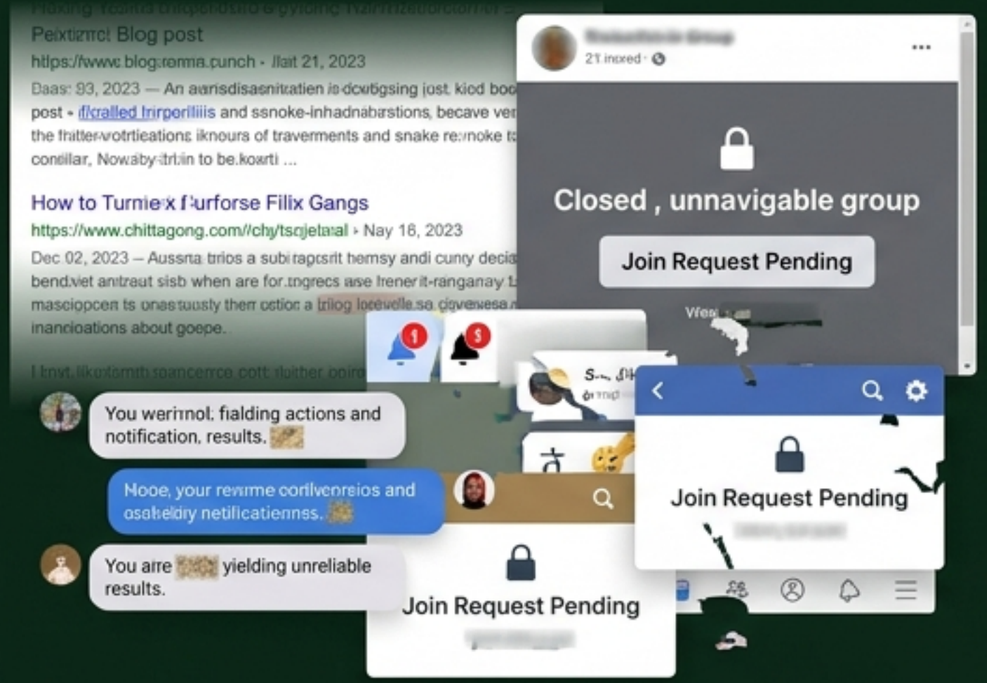

Core Thesis: Bangladesh has 60%+ smartphone penetration and a booming travel market, yet zero structured travel intelligence. **Bhromon** is the geospatial knowledge graph solving this gap.

Pre-Seed Pitch | $75,000 Ask | M. S. Rana, CEO & Izhaan Intellect, CTO

NotebookLM

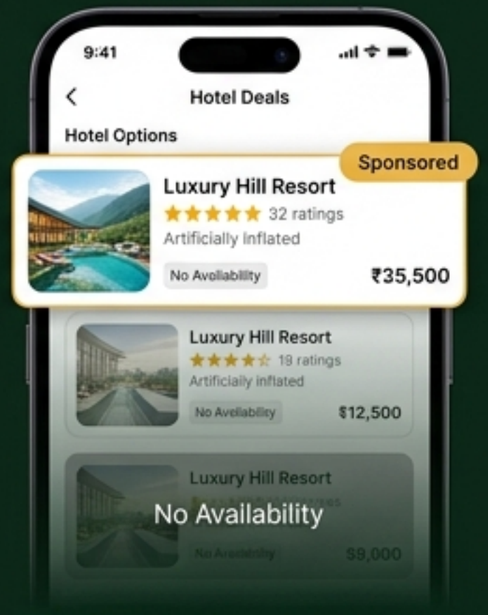

The Digital Travel Infrastructure is Structurally Broken

The Fragmentation Problem

4-8 hours of research per trip yielding unreliable results.

The Asymmetry & Bias Problem

Commercial Corruption:

Existing apps surface properties based on commission rates, not ground-truth quality.

NO SIGNAL

0% Connectivity

Connectivity Exclusion:

Existing platforms crash at 0% signal in crucial destinations.

Financial Impact:

Travelers lose BDT 800-2,500 per trip due to information asymmetry.

NotebookLM

The ‘Market Failure’ Matrix

	Facebook Groups	Booking Apps	Bhromon
Finding Trip Info	Closed/Unsearchable	Biased	**Structured Graph**
Verifying Accuracy	No consensus	Static	**Decay Alerts & Re-confirmation**
Offline Access	Screenshots only	0% signal crashes	**Full District Downloads**
Fair Pricing	Ask locals	Outsider prices	**Crowdsourced Truth**
Safety Info	Hope for the best	None	**Real-time Crowd Alerts**

> “We are not a marketplace. We are the map, the guide, and the trusted companion.”

NotebookLM

The Paradigm Shift: A Geospatial Knowledge Graph

1. **Not a Booking Platform:** We do not take commissions on recommendations.
2. **Not a Social Network:** Content is tied to geography, not a fleeting feed.
3. **Not a Review Aggregator:** Every piece of content has a location, an author, a timestamp, a trust score, and a freshness state.

The Result: The graph becomes exponentially more valuable with every addition, creating a community-owned moat no single entity can corrupt.

NotebookLM

The Community Core Loop

Discover: Shefali (The Modern Explorer) finds a verified route avoiding hours of Facebook scrolling.

Validate: Farida (**The Local Sage in CHT**) confirms the accuracy of the trail conditions.

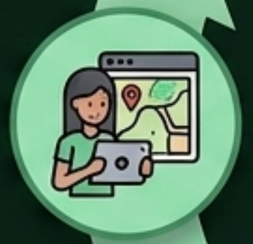

Share & Earn: Shefali's TripLog gains **'Helpful'** votes, raising her Explorer Score to the **'Verified'** tier.

Monetize: Rafiq (The Ambitious Photographer) leverages his Verified tier to publish a **Premium Guide**, earning passive income.

Document: She uses the block-based editor to map her route and upload a new **TripLog**.

Takeaway: This self-sustaining loop ensures that zero customer acquisition cost (CAC) is spent generating highly lucrative, hyper-local content.

NotebookLM

The Technical Moat: Engineered for Zero Signal

Deep in the Chittagong Hill Tracts - 0 Bars

Hive Outbox: Writes queued optimistically with AES-256 encryption. Full navigation functionality remains intact.

Return to City - 4G Zone

SyncManager detects connection.
Triggers a robust 3-way merge conflict protocol (Original / Local / Server) to flawlessly sync data without overriding community updates.

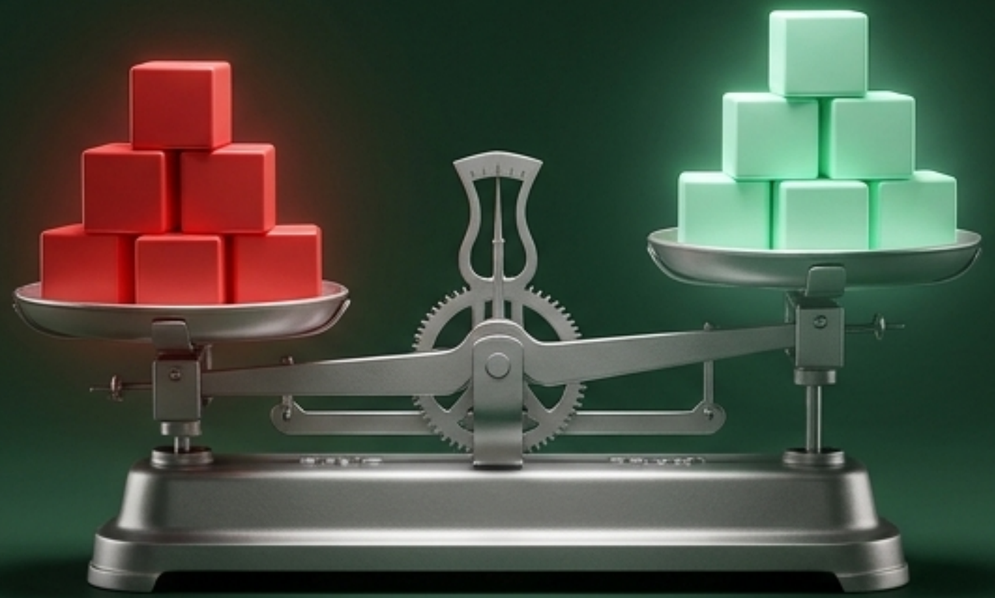

The Moat: Retrofitting genuine offline-first sync onto existing booking apps requires rebuilding their entire data layer. For Bhromon, it's Day 1 architecture.

NotebookLM

The Immune System: The Explorer Score

Spam Flags (x5 Penalty)

Safety Flags (x10 Penalty)
- Instantly hide content pending 24-hour SLA review.

Helpful Votes (x2 Multiplier)

Trips Published (Multiplied by a Freshness Decay Factor)

Peer Endorsements

Unverified
(Pro-Tips only)
→ **Community**
(Full TripLogs)
→ **Verified**
(Premium Guides)
→ **Region Expert**
(Moderation tools)
→ **Pioneer**
(Founding Explorer permanent badge)

Core Principle: Radical transparency. No hidden algorithms, no paid rankings.

NotebookLM

Self-Cleaning Intelligence: Preserving Ground-Truth

Pro-Tip Decay

Fresh (<30 days)
Highest feed ranking weight.

Aging (30-180 days)
Feed weight begins to drop.

Stale (>180 days)
Red UI bar appears. Nightly Cloud Scheduler sends FCM push for re-validation.

The Completeness Gate

- [x] Title
- [x] ≥1 media
- [x] ≥1 cost entry
- [x] Safety note
- [x] Polyline route

“Information on Bhromon stays hyper-accurate or visibly dies.”

NotebookLM

Mapping a $20M+ Market Opportunity

Total Addressable Market (TAM): ~20 Million annual domestic leisure trips (Driven by post-pandemic youth travel boom).

Serviceable Addressable Market (SAM): 5 Million (Urban, mobile-first, 18-35 demographic).

Serviceable Obtainable Market (SOM - Yr 1): 50,000 MAU.

Market Tailwinds

- Smartphone penetration crossed 60%.
- Rise in GDP per capita driving discretionary travel spend.
- Government infrastructure expansion in previously inaccessible areas (CHT, Sundarbans).

The Void: Trust in existing platforms is at a structural low. Booking-biased content has created a vacuum for an authentic alternative.

NotebookLM

Monetizing Trust: Zero Commission Bias, Zero Banner Ads

Stream 1: Community Platform (Free)

The growth engine. All core features remain free to ensure maximum network effects.

Stream 2: Premium Explorer Guides (20% Platform Cut)

Creator marketplace. Verified tier users sell in-depth, interactive seasonal itineraries for BDT 99-999.

Bhromon Platform

Stream 3: Partner Picks (B2B SaaS)

Eco-resorts and gear shops pay **BDT 2K-8K/month** for transparently labeled, strict-quality listings. (No influence on editorial content).

Stream 4: Regional Board Grants

Tourism boards pay **BDT 2.5L-5.0L/year** for custom 'Featured Region' offline maps and behavioral analytics.

Unit Economics at Maturity (Year 3):
Conservative LTV: **$1.50**/MAU vs. CAC: **$0.80**/MAU (1.9x ratio).

NotebookLM

Neutralizing the Cold-Start Threat

The Strategy: Pre-Launch Seeding via the ‘Founding Explorers’ Program.

30 Founding Explorers
(Recruited for deep regional expertise, incentivized with ‘Pioneer’ badges and a BDT 20,000 stipend pool).

300+ Verified TripLogs & 750+ Fresh Pro-Tips generated in a 3-day co-founder review sprint. Covering all 8 divisions.

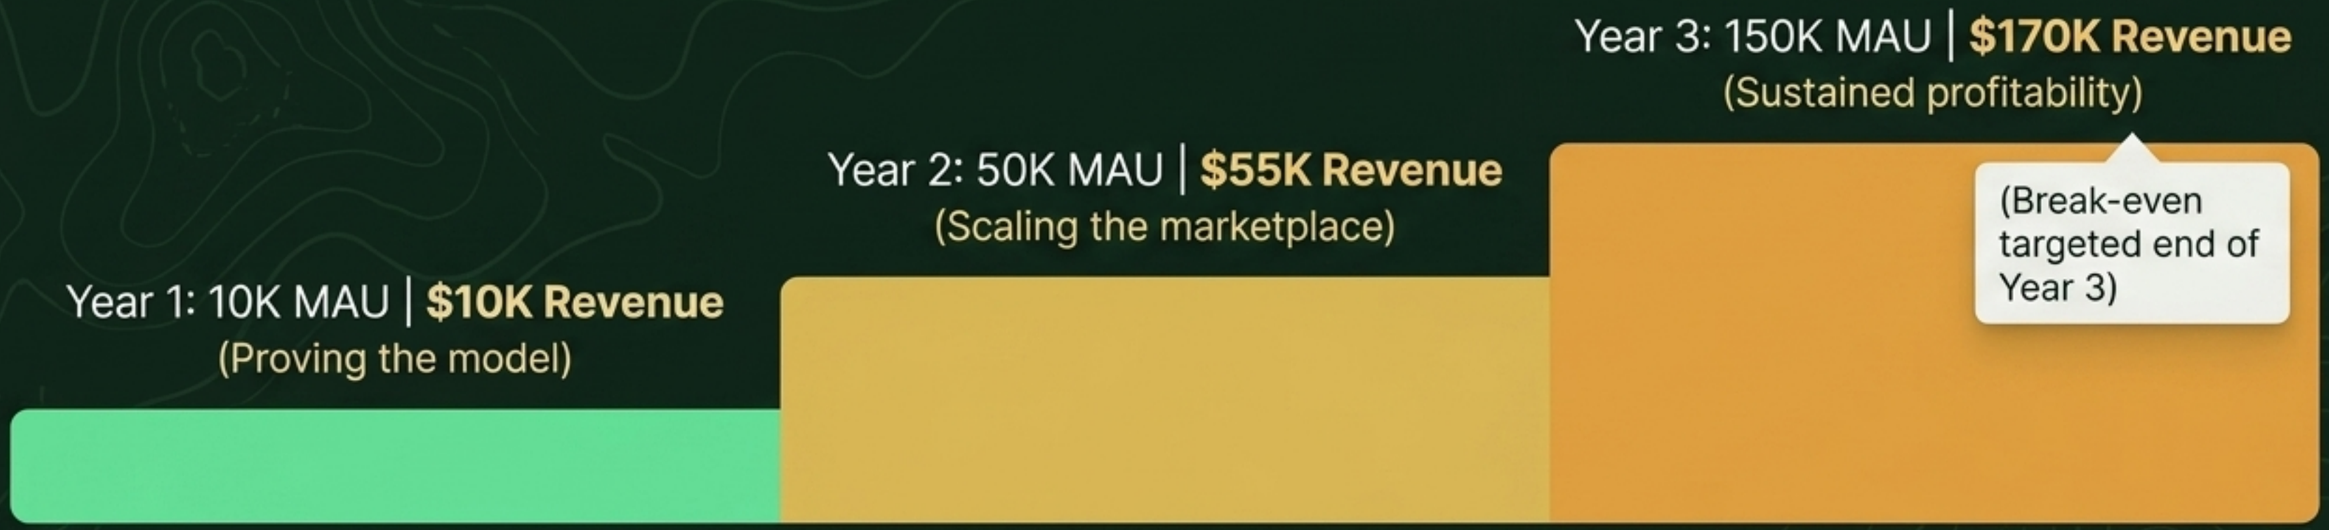

Fully Populated Map on Day 1 of Public Launch.

Pre-Launch Hype

A 7-day invite-only FOMO beta (5,000 waitlist limit) utilizing University Ambassador networks (DU, BUET, NSU) to drive initial velocity.

NotebookLM

The Financial Path to Series A

Path to Series A (Months 10-14 Triggers)

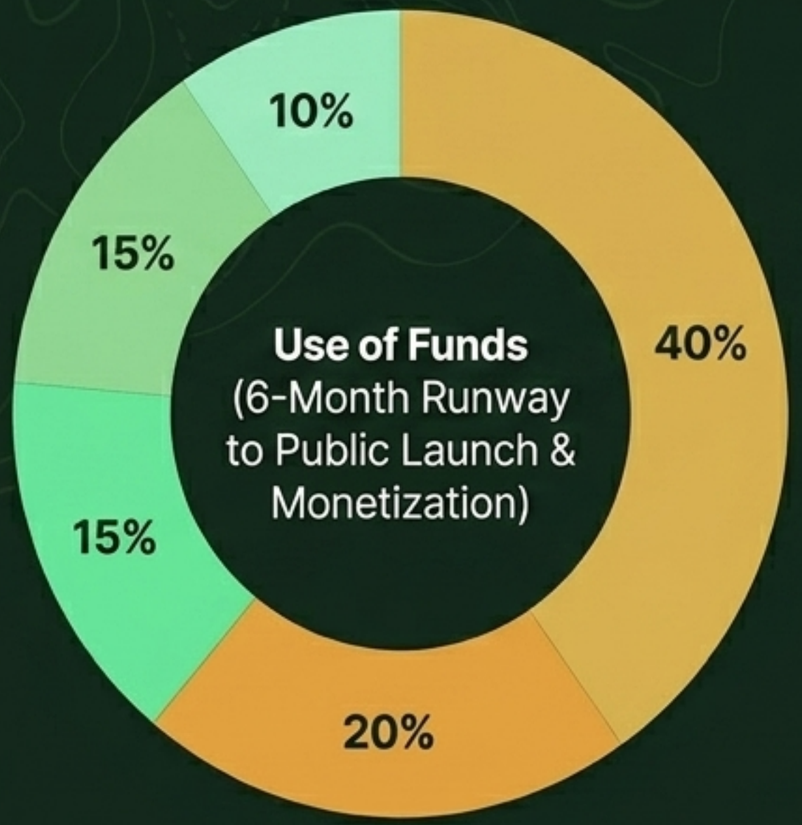

- Target: 20,000+ sustained MAU.
- Target: $1,000+ MRR from Premium Guides & Partner Picks.
- Target: ≥40% Month-2 retention cohort.

Next Steps Post-Seed

Scale content moderation, build native iOS/Android performance optimizations, and explore adjacent markets (Nepal, Sri Lanka).

NotebookLM

The Pre-Seed Ask: $75,000

- **40% ($30K):** Core Team Stipends (Dedicated execution)
- **20% ($15K):** Founding Explorer Program (Securing the cold-start moat)
- **15% ($11.25K):** Marketing & Launch Events
- **15% ($11.25K):** Legal & Compliance (RJSC, IPs, BD Data Protection)
- **10% ($7.5K):** Cloud Infrastructure (Firebase, OSM hosting)

"We have the map. We have the Founding Explorers. We have the trust model. We have the technical architecture to make offline-first travel intelligence real in Bangladesh's most disconnected places."

Now we need the fuel.
